### For Immediate Release

#### **LDG introduces PC-controlled automatic antenna tuners**

This is the next step in the evolution of the automatic antenna tuner

St. Leonard MD, June 2019 - LDG is proud introduce the next step in the evolution of the automatic antenna tuner: PC control. With the addition of a low-cost USB cable, radio amateurs can control their AT-600ProII and AT-1000ProII tuners from their PCs, without any upgrades to the tuner. Many of the tuner's front panel functions can be controlled via the free LDG GUI software. Use the internet and remote desktop on your computer to control your tuner from anywhere. Functions available in the free GUI are:

- Start Tune
- Select Ant1/Ant2
- Select Bypass
- Choose Auto/Manual modes
- SWR Result Indicator
- Tune In process Indicator

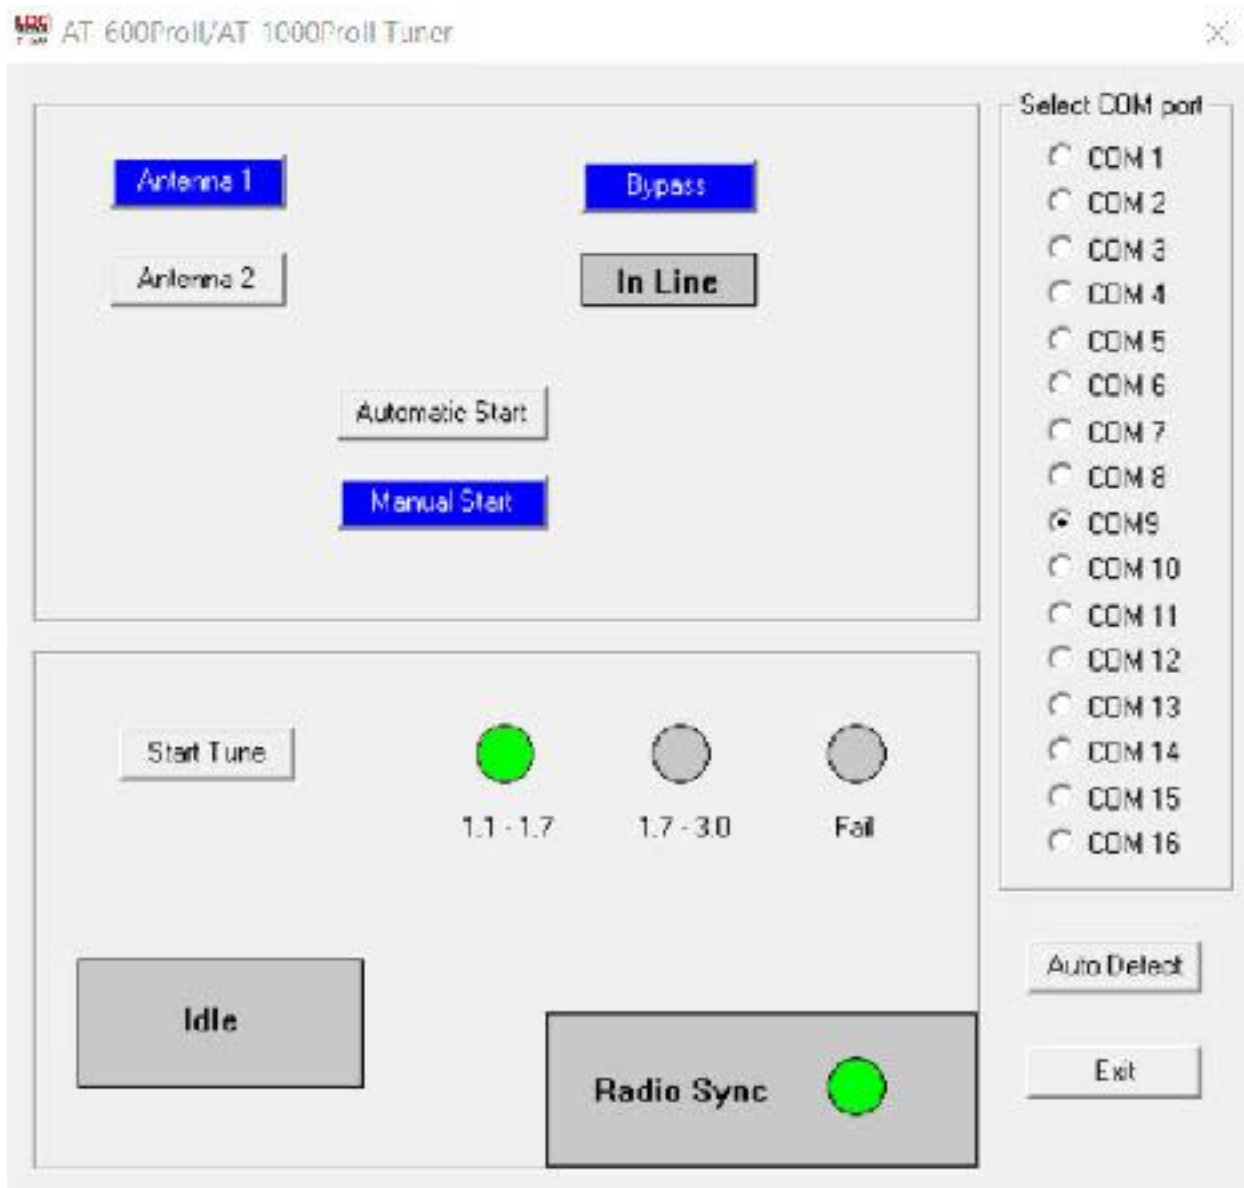

A custom USB cable connects the PC to the tuner via the tuner's Meter port. Information for making the USB interface cable for the AT-600ProII or AT-1000ProII. Owners of these tuners can and download the free app and cable information from the LDG web site.

LDG continues to set new standards for autotuners and accessories in amateur radio service. Visit the LDG website at [www.ldgelectronics.com](http://www.ldgelectronics.com) for more information.

LDG Electronics is a family-owned and operated company dedicated to bringing innovative, quality products to the amateur market. Our focus is on anticipating and meeting our customer's needs, and providing them with world-class support as they install and use our products.
